Input Information

I have created a data structure according to different input types.

Here we used two different scanners

1. HPScanjetN6350
2. NAPS2 (https://www.naps2.com/)

Scanner	Resolution	Bit depth	File type (Input)	Change inside the code	Status
Old Images	196dpi	24	tif	No	Working
HPScanjetN6350	200dpi	24	jpeg	No	Not working
HPScanjetN6350	600dpi	8	tiff	No	Not working
HPScanjetN6350	600dpi	8	tiff	Yes (change input file type .tiff)	Not working
HPScanjetN6350	600dpi	8	tiff to tif (Change online)	No	Not working
NAPS2	600dpi	24	tif	No	Working
NAPS2	200dpi	24	tif	No	Working

According to the table looks like NAPS2 scanner is working.
